

To Whom It May Concern:

From November of 2002 until January of 2004 the following contractor has been working at “Puget Sound Naval Shipyard” doing a major Retrofit of the office spaces.

Northwest Edison has been working in all types of office area’s to comply with the retrofit contract issued by Bonneville Power Administration (BPA). Due to their hard work, not only getting the lighting completed, but also in careful follow up before leaving an office space to insure the customer was left with a clean area. Some of the customers did not even know they had been in their space.

This contractor was also willing to work around the schedule of the office personnel often coming back at a later time/date so as to allow the customer to complete any type of projects that were in progress. As the retrofitting project progressed through the different buildings, the customers became even more willing to work with the retrofit crews for what was being called the “HAPPY LIGHTS”.

Northwest Edison was willing to share their knowledge of lighting to help line up information for future projects that will be coming down the road. They brought their supplier/manufacturer of fixtures to prove there were light fixtures that could give us the light levels needed from different elevation. This was in non-office work areas.

My responsibility was to serve as the eyes and ears for BPA as well as the representative for the contracting branch, Southwest Division, out of San Diego, California. From what I witnessed while working with Northwest Edison, I would be happy to have them back at any time to do retrofitting at this facility. If you have any questions that you feel I might be able to answer, please feel free to call me at my office, 360-476-1167.

Yours respectfully,

David C. Graham
